[Wicklow Town Centre Strategy](#)

Submission

The one way systems in Wicklow town needs to be reassessed. Blocking access up Church Hill has created a bottleneck coming into the town throughout the day.

The one way system on the main street has made it very difficult to get through the town without delays. When people are stopping to park their cars on the main street it very often results in a backlog of cars waiting. Not having another lane to pass out these parking cars has created a problem that was not there before the one way system. I witness and experience this several times a day. The small amount of extra street parking spaces made available through the one way system does not justify keeping it in place.
