Topic

Residential Development

Submission

Around the village of Rathnew and Wicklow town we have houses been built on every green field available with no infrastructure in place to accommodate this, wildlife is being pushed out of the community and not been considered in any of this planning, tinakilly is being destroyed and is probably the last place people from the community have to enjoy nature and all it has to offer, there is plenty of places to build houses that are needed but we need to leave our beauty spots and wildlife alone.

Topic

Strategic Flood Risk Assessment & SFRA Map

Submission

I live in woodside in Rathnew and every time it rains now we have a problem with flooding, it's probably the lowest point in the village and all run off water ends up down there causing problem after problem, insurance companies are reluctant to offer insurance for the residents of woodside and more houses in tinakilly are going to put us in more trouble. The river that runs behind woodside has wild brown trout and sea trout in it and they will be washed away with all the water that will be dumped in to the river, otters and kingfishers are also going to be seriously affected by this aswell. There is too much to lose by allowing more houses to be built at tinakilly and our wildlife needs to have somewhere to call home as well as people do.
